# 1 INTRODUCTION

---

Audalia Resources Limited (Audalia) has applied for environmental approval under Section 38 of the *Environmental Protection Act 1986* (WA; EP Act) to construct and operate the Medcalf Project (the Proposal); a vanadium, titanium and iron mining operation with associated infrastructure. The Proposal is located in the Bremer Range, Lake Johnston region of Western Australia, approximately 470 kilometres (km) east south-east of Perth (Figure 1).

The proposed Development Envelopes (DEs) outline the boundaries for the Proposal (Figure 1), where all ground disturbance and indicative key Proposal elements listed below are proposed to occur. The Proposal consist of two distinct DEs; a Mine DE and a Haul Road DE. These DEs are located within a Mining Lease M63/656 and a Miscellaneous Licence L63/75 issued under the *Mining Act 1978* (WA; Mining Act; Figure 2).

The Mine DE will require clearing of no more than 300 ha within the 898 ha extent of the Mine DE in order to develop the mine pits and associated infrastructure (Figure 2). The Haul Road DE will require clearing of no more than 350 ha within the 1,633 ha extent of the Haul Road DE in order to develop the haul road and associated infrastructure (Figure 3 and Figure 4).

Access to the site is proposed to be via a 74 km unsealed private haul road from the mine site to an ore transfer hub adjacent to the Coolgardie-Esperance Highway (Figure 3 and Figure 4).

## 2 SCOPE AND PURPOSE

---

During their assessment of the Proposal, Audalia considered the Proposal would have a significant residual impact from the following actions:

- *M. aquilonaris* (T): disturbance of 1.51 ha of sub-optimal habitat and potential indirect impacts to 2.91 ha of critical habitat;
- *Eucalyptus rhomboidea* (P4): disturbance of 768 individuals and 0.4 ha of population extent. Potential indirect impacts to 430 individuals;
- *Stenanthemum bremerense* (P4): disturbance of 2,049 individuals and 21 ha of population extent. Potential indirect impacts to 1,379 individuals;
- Up to 309 ha of disturbance of the Proposed Bremer Range Nature Reserve; and
- Up to 285 ha of disturbance of the Bremer Range Vegetation Complexes (PEC).

If the Proposal is approved, Audalia predicts that an offset condition will be included in the Ministerial Statement (MS) to counterbalance the significant residual impacts of the Proposal listed above. This Offset Strategy has been prepared in anticipation of this offset condition, in order to detail potential suitable offset measures to counterbalance the significant residual impacts of the Proposal. This Offset Strategy will remain in draft form until accepted by Environmental Protection Authority (EPA) Services after further detailed discussions with EPA Services, Department of Biodiversity, Conservation and Attractions (DBCA), and Department of Mines, Industry Regulation and Safety (DMIRS).

### 3 STAKEHOLDER CONSULTATION

Audalia has consulted with a range of relevant external stakeholders throughout the planning and construction phases of the Proposal. The core principle of the stakeholder engagement strategy is to identify relevant external stakeholders, and consult with them to identify their concerns, appropriate mitigation strategies and likely environmental outcomes. The outcomes of this stakeholder consultation relevant to this Offset Strategy are summarised in Table 1.

## 4 PROPOSED OFFSETS

### 4.1 SIGNIFICANT RESIDUAL IMPACTS

After the implementation of mitigation measures described in the Proposal ERD, the Proposal is predicted to have a residual impact on the following environmental values:

- *M. aquilonaris* (T): disturbance of 1.51 Hectare (ha) of sub-optimal habitat and potential indirect impacts to 2.91 ha of critical habitat;
- *Eucalyptus rhomboidea* (P4): disturbance of 768 individuals and 0.4 ha of population extent. Potential indirect impacts to 430 individuals;
- *Stenanthemum bremerense* (P4): disturbance of 2,049 individuals and 21 ha of population extent. Potential indirect impacts to 1,379 individuals;
- Up to 309 ha of disturbance of the Proposed Bremer Range Nature Reserve; and
- Up to 285 ha of disturbance of the Bremer Range Vegetation Complexes (PEC).

### 4.2 DETAILS OF PROPOSED OFFSETS

Table 2 describes the measures proposed to offset the residual impacts to these values. Noting the early stage of the assessment process these measures may be revised prior to the commencement of the EPA's assessment of the Proposal as a result of detailed discussions with DBCA and DWER.

Table 2: Proposed offsets

| Offset  | Type                                      | Details  | Relevant Values   |
|---|---|--|---|
| <p>Provision of funding and support (to address any DMIRS concerns) for the development of a conservation reserve or other protected area (i.e. under Section 19 of the Mining Act) for:</p> <ul style="list-style-type: none"> <li>• <i>M. aquilonaris</i> sub-populations 1a, 1d and 1e, and surrounding critical habitat extents</li> <li>• 2 <i>Eucalyptus rhomboidea</i> sub-populations</li> <li>• 12 <i>Stenanthemum bremerense</i> sub-populations</li> </ul> <p>The proposed conservation reserve or other protected area is shown in Figure 5</p> | Direct – preservation of existing habitat | <p>The majority of the <i>M. aquilonaris</i> critical habitat lies on Audalia's Mining Act tenure and as such Audalia has a suitable understanding of the mineralisation of the proposed area and the economic implications of a protected area.</p> <p>It is Audalia's position that given the current lack of germination knowledge on the species, the <i>M. aquilonaris</i> sub-populations should not be disturbed for mining activities and the development of a reserve or other protected area would reduce the likelihood of this occurring in the future. Audalia proposes to provide funding for DBCA to develop an appropriate reserve or other protected area over <i>M. aquilonaris</i> sub-populations 1a, 1d and 1e, and surrounding critical habitat extents, including the management of the reserve for a minimum of 20 years.</p> <p>The offset would ensure protection of 76% of known individuals across three of the five current sub-populations. Audalia notes that sub-population 1b and 1c lie on top of mineralised ore therefore these sub-populations have been excluded from the proposed protected area. The exclusion of mineralised ore from the reserve (or other protected area) is expected to provide more assurance that the reserve (or other protected area) would not be opposed by DMIRS or other mining companies.</p> | <i>M. aquilonaris</i> ,<br><i>Eucalyptus rhomboidea</i> ,<br><i>Stenanthemum bremerense</i> |

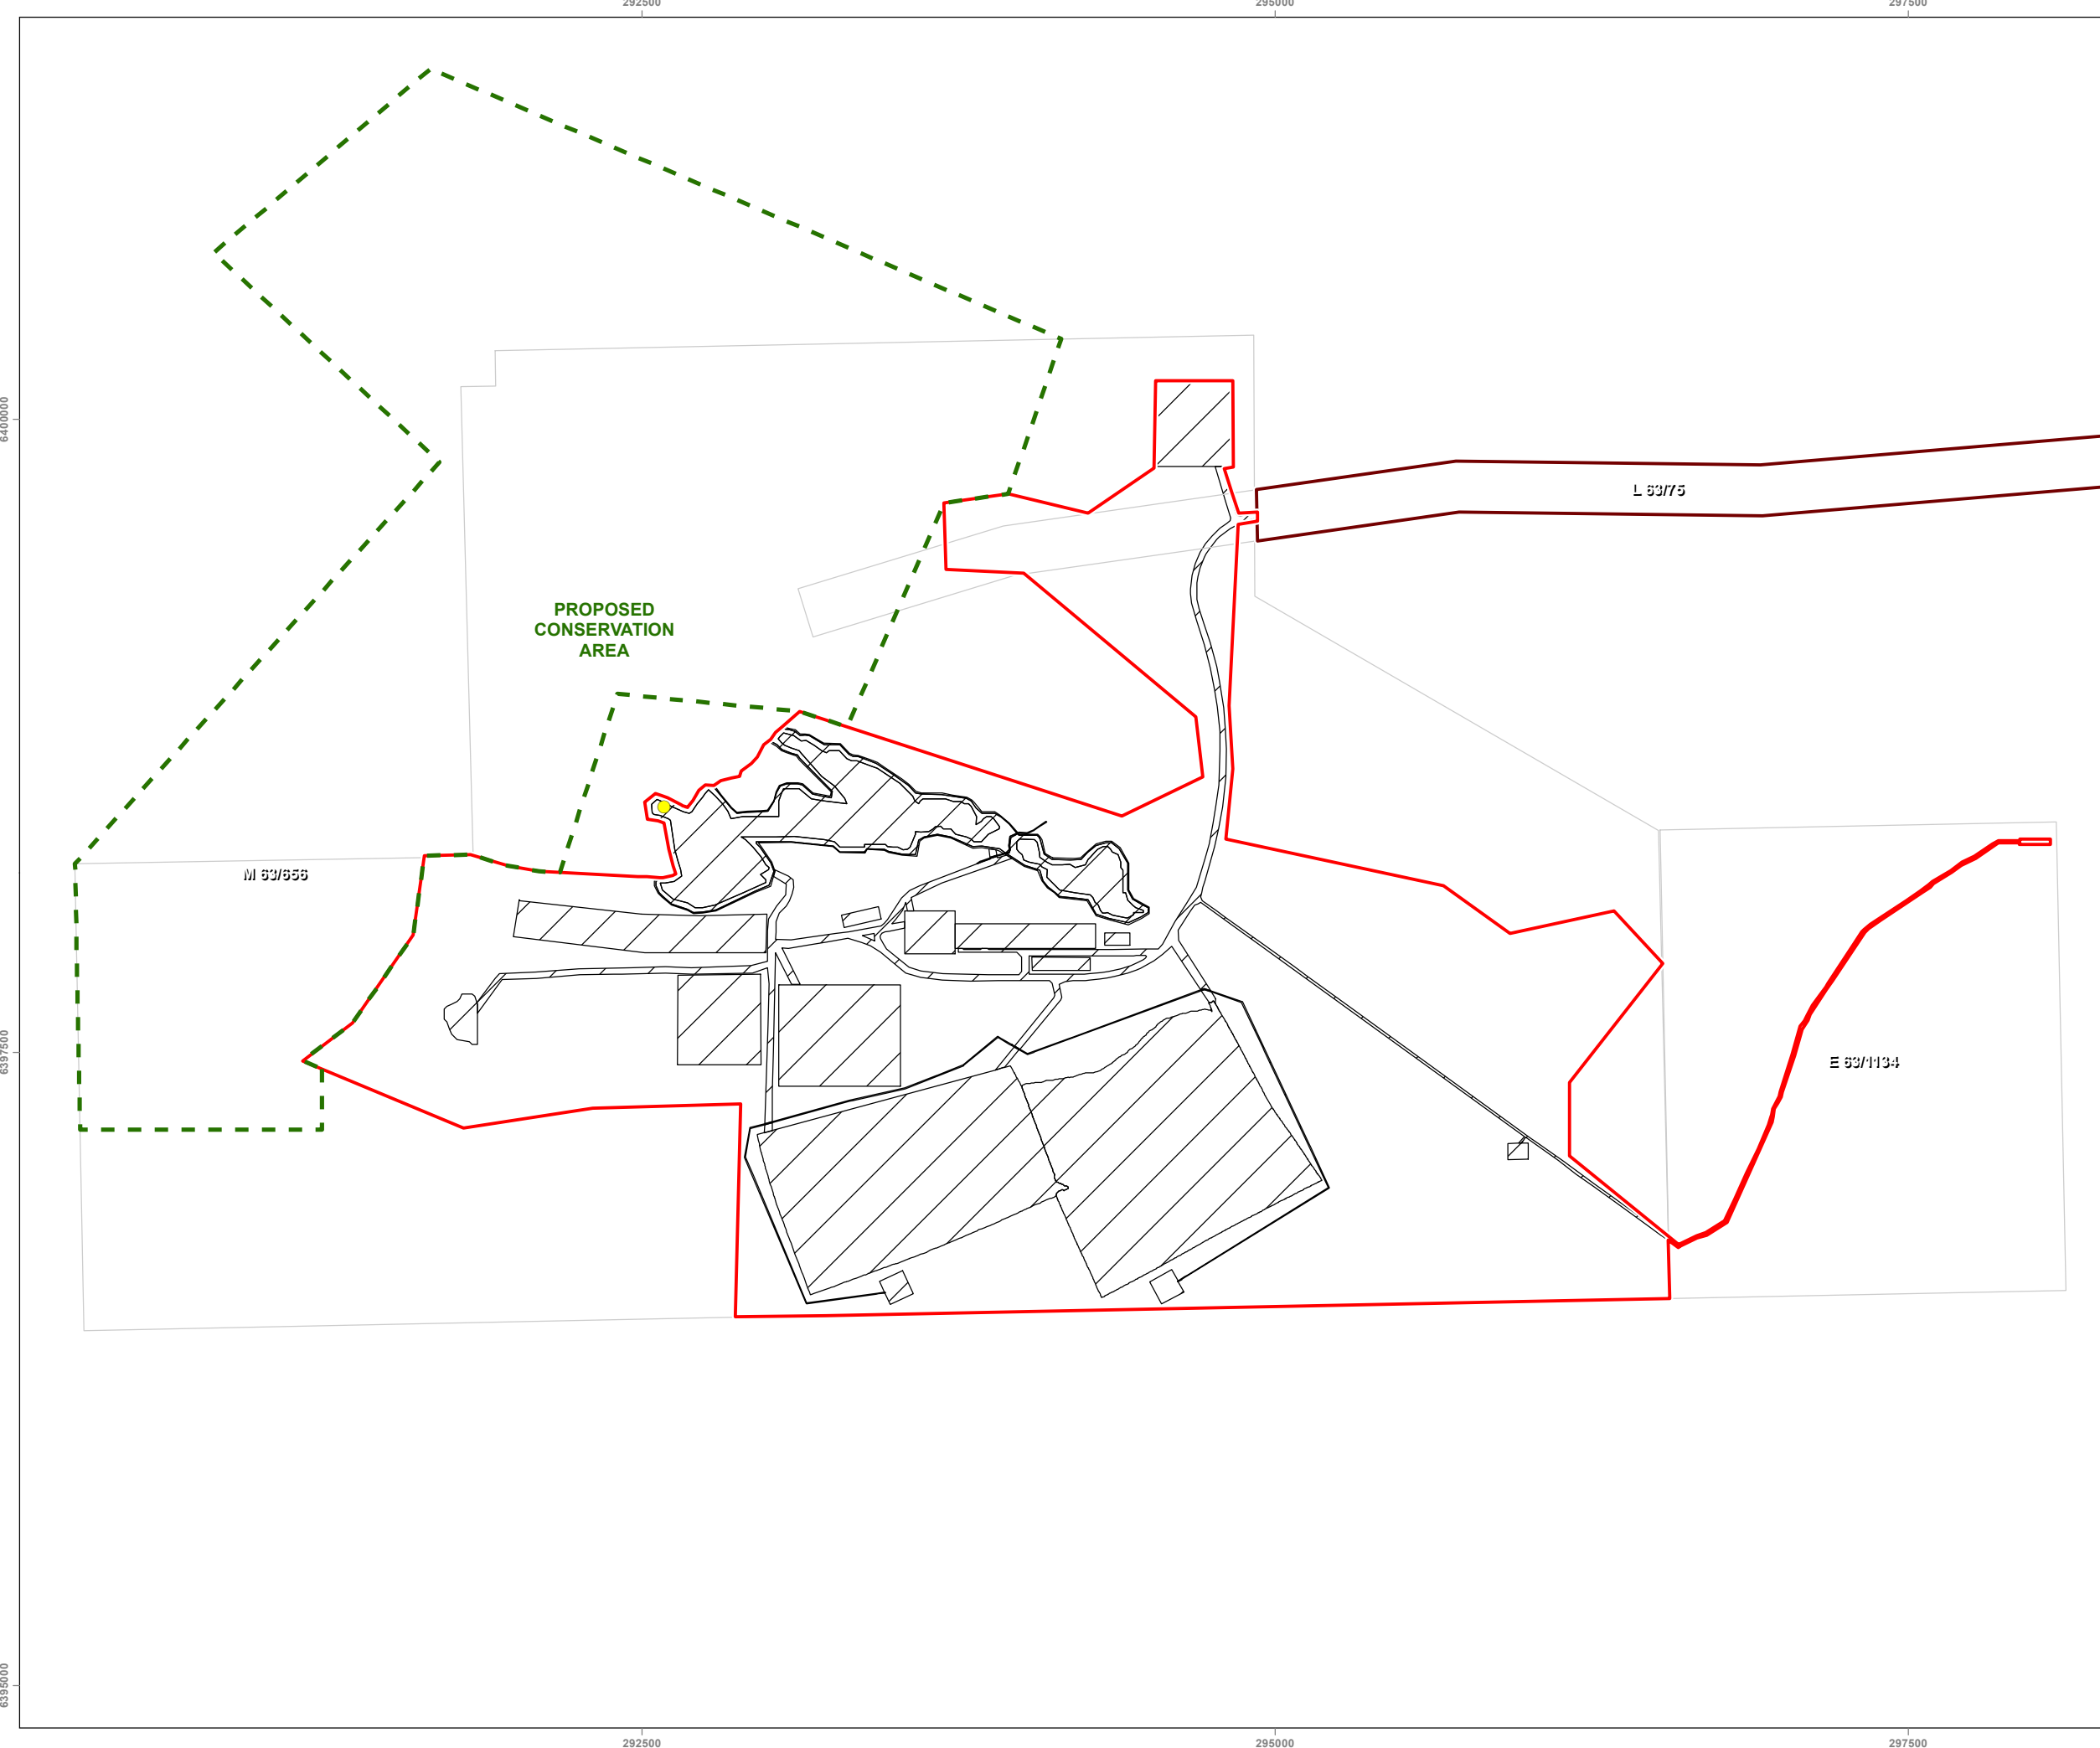

| Offset   | Type  | Details   | Relevant Values   |
|--|---|---|---|
|  |   | <p>Two <i>Eucalyptus rhomboidea</i> and 12 <i>Stenanthemum bremerense</i> sub-populations also lie within the proposed conservation reserve or other protected area (Figure 5).</p> <p>The offset would ensure protection of only 260 (1.7%) of known local <i>Eucalyptus rhomboidea</i> individuals however will include two of the six local sub-populations (33.3%) and 8 ha of the 12 ha of local population extent (75%).</p> <p>The offset would ensure protection of 29,611 (73.8%) of known local <i>Stenanthemum bremerense</i> individuals and will include 12 of the 25 local sub-populations (48%) and 19.1 ha of the 56 ha of local population extent (34.1%).</p>   |   |
| Revegetation of previously disturbed vegetation within the <i>M. aquilonaris</i> critical habitat boundary (access tracks)   | Direct – revegetation of disturbed habitat                    | <p>There are a number of historic tracks that currently run through the critical habitat boundary. If DBCA deems it suitable, Audalia proposes to cut off the current access to these tracks and rehabilitate the tracks that lie within the critical habitat boundary. Some rehabilitation areas that lie within optimal habitat but outside the sub-populations may be used for germination trials to determine if additional <i>M. aquilonaris</i> individuals can become established in these areas.</p> <p>Audalia intends to either fund DBCA to conduct this work or commission experienced consultants to complete the work with direction from DBCA. This work may include provision of suitable access to any conservation reserve created by the above offset.</p> | <i>M. aquilonaris</i>   |
| On ground management within <i>M. aquilonaris</i> critical habitat and local <i>Eucalyptus rhomboidea</i> and <i>Stenanthemum bremerense</i> populations   | Direct – management of existing and rehabilitated habitat     | <p>Audalia intends to either fund DBCA to conduct on ground management of the <i>M. aquilonaris</i> critical habitat and surrounds based on a general provision of funds at a rate to be agreed with DBCA), or commission experienced consultants to complete the work with direction from DBCA. The funding is proposed to be for a minimum of 20 years.</p>   | <i>M. aquilonaris</i> ,<br><i>Eucalyptus rhomboidea</i> ,<br><i>Stenanthemum bremerense</i> |
| <p>Ongoing <i>M. aquilonaris</i>, <i>Eucalyptus rhomboidea</i> and <i>Stenanthemum bremerense</i> research:</p> <ul style="list-style-type: none"> <li>• Ongoing germination trials</li> <li>• Annual plant counts</li> <li>• Regional searches after fire events</li> <li>• Sub-population health monitoring</li> <li>• Rehabilitation trials</li> <li>• Genetic studies</li> </ul> | Indirect – improvement of scientific knowledge of the species | <p>Audalia has commissioned significant research work on these species to inform this ERD. It is proposed to continue the longer-term portions of this research such as germination, changes to plant numbers, health and rehabilitation trials. This information will inform the recovery and preservation planning for these species.</p>   | <i>M. aquilonaris</i> ,<br><i>Eucalyptus rhomboidea</i> ,<br><i>Stenanthemum bremerense</i> |
| Successful translocation of all impacted <i>Eucalyptus rhomboidea</i> and <i>Stenanthemum bremerense</i> individuals (numbers to be based on   | Direct – replacement of existing population                   | <p>Audalia is currently undertaking germination trials for <i>Eucalyptus rhomboidea</i> and <i>Stenanthemum bremerense</i> to allow the replacement of any individuals that are required to be disturbed for the Proposal. These germination trials will continue to inform the target regrowth and establishment of at least the</p>   | <i>Eucalyptus rhomboidea</i> ,<br><i>Stenanthemum bremerense</i>                            |

| Offset   | Type  | Details  | Relevant Values  |
|--|---|--|--|
| pre-clearance survey) to rehabilitation areas  |   | same number of individuals impacted by the Proposal. Audalia notes that this offset carries some risk as germination success has not yet been confirmed for either species.  |  |
| On ground management of the Proposed Bremer Range Nature Reserve and Bremer Range Vegetation Complexes PEC | Direct – management of existing habitat and rehabilitation of historic disturbance on closed mining tenements | Audalia intends to either fund DBCA to conduct on-ground management of the Proposed Bremer Range Nature Reserve and Bremer Range Vegetation Complexes (PEC) or commission experienced consultants to complete the work with direction from DBCA. The funding is proposed to be for a minimum of 20 years and based on a general provision of funds at a rate to be agreed with DBCA. | <i>M. aquilonaris</i> ,<br><i>Eucalyptus rhomboidea</i> ,<br><i>Stenanthemum bremerense</i> ,<br>Proposed Bremer Range Nature Reserve, Bremer Range Vegetation Complexes PEC |

An assessment of the adequacy of these offsets is provided in Section 5.

## 5 ASSESSMENT OF THE PROPOSED OFFSETS

---

Offsets are the last of the four steps in the mitigation hierarchy (Avoid, Minimise, Rehabilitate and Offset). They are only applied to counterbalance residual significant impacts when the other steps have already been applied to a Proposal.

Audalia commissioned numerous environmental surveys and studies for the Proposal. The surveys determined that there were key environmental values that required protection, including significant flora, the Bremer Range Vegetation Complexes (PEC) and the proposed Bremer Range Nature Reserve.

Audalia assessed the findings of the surveys and studies and made significant changes to the Proposal design. Some of these changes carried a significant cost (such as reducing the size of the Vesuvius mine pit) – affecting the unit costs of the Proposal. Changes were also made to avoid and minimise construction and operational impacts, such as implementing strict clearing controls, dust mitigation and surface water drainage controls.

The application of these avoidance and minimisation mechanisms in Proposal design and operations has meant that impacts to many key environmental values have been avoided or significantly reduced. Audalia understands that this conclusion is in part based on studies and modelling, and as such monitoring has been committed to in order to verify the study and model outputs.

### 5.1 WA ENVIRONMENTAL OFFSETS GUIDELINES

The WA Environmental Offsets Guidelines (EPA, 2014) states:

“In general, significant residual impacts include those that affect rare and endangered plants and animals (such as declared rare flora and threatened species that are protected by statute), areas within the formal conservation reserve system, important environmental systems and species that are protected under international agreements (such as Ramsar listed wetlands) and areas that are already defined as being critically impacted in a cumulative context. Impacts may also be significant if, for example, they could cause plants or animals to become rare or endangered, or they affect vegetation which provides important ecological functions”.

Audalia has assessed the residual impacts of the Proposal against the residual impact significance model provided in the WA Environmental Offsets Guidelines (EPA, 2014). The findings of this assessment are provided in Table 3.

|   |  |  |  | Terrestrial Fauna   |  |  |   |
| Part V Clearing Principles  | c - Rare flora   | d - TECs   | e - Remnant vegetation   | f - Wetlands and waterways  | h - Conservation areas   | a - High biological diversity  | b - Habitat for fauna   |
| <b>Residual impact that is environmentally unacceptable and cannot be offset</b>  | No residual impacts are considered to meet this criteria   |  |  |   |  |  |   |
| <b>Significant residual impacts that will require an offset</b> – all significant residual impacts to species and ecosystems are protected by statute or where the cumulative impact is already at a critical level   | It is considered likely that the residual impacts to <i>M. aquilonaris</i> would meet this criteria  | No residual impacts are considered to meet this criteria - no TECs were recorded within the DEs                          | No residual impacts are considered to meet this criteria – all remaining vegetation will have 97% or more of their pre-European extent remaining | No residual impacts are considered to meet this criteria as no wetlands or waterways that are protected by statute lie within the DEs or would be indirectly impacted by the Proposal | No residual impacts are considered to meet this criteria as no conservation areas that are protected by statute lie within the DEs or would be indirectly impacted by the Proposal | No residual impacts are considered to meet this criteria, while the Great Western Woodland and specifically the Bremer Range are known to have high ecological significance the residual impacts on these areas are not considered significant given the area of intact habitat will remain outside the DEs. | No residual impacts are considered to meet this criteria as no restricted habitats for Threatened Fauna will be impacted and suitable intact habitat will remain outside the DEs. |
| <b>Significant residual impacts that may require an offset</b> – any significant residual impacts to potentially threatened species and ecosystems, areas of high environmental value or where the cumulative impact may reach critical levels if not managed | It is considered likely that the residual impacts to <i>Eucalyptus rhomboidea</i> and <i>Stenanthemum bremerense</i> would meet this criteria. | It is considered likely that the residual impacts to the Bremer Range Vegetation Complexes PEC would meet this criteria. | No residual impacts are considered to meet this criteria – refer above   | No residual impacts are considered to meet this criteria – refer above  | It is considered likely that the residual impacts to the proposed Bremer Range Nature Reserve would meet this criteria.  | No residual impacts are considered to meet this criteria – refer above   | No residual impacts are considered to meet this criteria – refer above  |

As described in Table 3, based on the findings of the Environmental Impact Assessment in the ERD, Audalia considers that the Proposal's residual impacts to *M. aquilonaris*, *Eucalyptus rhomboidea*, *Stenanthemum bremerense*, the Bremer Range Vegetation Complexes PEC and the proposed Bremer Range Nature Reserve may be considered significant and require offsets.

During the assessment Audalia noted some uncertainty about whether the Proposal impacts the Bremer Range Vegetation Complexes PEC and the proposed Bremer Range Nature Reserve may be considered significant and require offsets. Constituted a significant residual impact that would require offsets. The WA Environmental Offsets Guidelines (EPA, 2014) notes that:

“There may be cases where there is some uncertainty about whether a significant residual impact will occur, and/or the extent of the impact. An offset may apply in some cases based on an assessment of the risk using a normal risk-based approach, that is considering the ‘likelihood’ of the impact occurring and the ‘consequences’ of the impact if it did occur, based on the evidence and information available. Offsets would normally only be applied in cases where there was a significant risk that the impact was likely to occur and there was likely to be a significant consequence”.

The indirect impacts described in the ERD are deliberately conservative (appropriately based on the precautionary principle) however it is unlikely that the full scale of indirect impacts would occur. Based on the above, Audalia has committed to ongoing monitoring that will inform and ultimately verify the scale of these residual indirect impacts. The key monitoring is considered to be the dust deposition monitoring and the ongoing Significant Flora Monitoring Programme.

The dust deposition monitoring and Significant Flora Monitoring Programme are committed to in the ERD in Section 5. These monitoring programmes are designed to monitor and compare dust deposition against model predictions, and monitor the health of significant flora populations over the life of the Proposal.

## 5.2 WA OFFSETS TEMPLATE

Audalia has completed a WA Offsets Template as per the requirements of the WA Environmental Offsets Guideline (EPA, 2014), provided in Table 4. Note that only the values that were deemed to require offsets are included (refer to the ERD for the complete list).

Table 4: WA offsets policy template

| Existing Environment / Impact   | Mitigation  |   |   | Significant Residual Impact  | Offset Calculation Methodology  |   |   |  |   |

## 5.3 OFFSET PRINCIPLES

In WA, government decision making processes in relation to the use of environmental offsets are underpinned by six principles. These are set out in the Environmental Offsets Policy (Government of WA, 2011). The Proposal and proposed offset has been assessed against each of these principles, provided in Table 5.

**Table 5: Assessment of the proposed offset against the six principles**

| No. | Principle  | Assessment outcome   |
|-----|--|--|
| 1   | Environmental offsets will only be considered after avoidance and mitigation options have been pursued.  | Audalia has applied the mitigation hierarchy by identifying measures to avoid, minimise and rehabilitate. Audalia's primary measure to meet this policy requirements was site selection and design, which avoided an minimised disturbance within several key flora habitat areas. The Development Envelope was reduced via a Section 43A accepted by the EPA on the 4 November 2020.  |
| 2   | Environmental offsets are not appropriate for all projects.  | It is acknowledged that offsets are not appropriate for all projects. As the Proposal may result in significant residual impacts on threatened and priority flora species, the proposed Bremer Range Nature Reserve and a PEC, an offset is considered to be required. The offsets proposed are considered to be appropriate to counterbalance the residual impacts on these environmental values.   |
| 3   | Environmental offsets will be cost effective, as well as relevant and proportionate to the significance of the environmental value being impacted. | The proposed offsets have been designed to be cost-effective by targeting the retention and conservation of existing environmental values, and translocation of <i>Eucalyptus rhomboidei</i> and <i>Stenanthemum bremerense</i> . The offsets are cost-effective as Audalia will be active in the area during the duration of the offset implementation so logistical costs will be minimal. The required translocation studies and implementation is an extension of germination work already commissioned by Audalia (through DBCA) therefore Audalia has reasonable knowledge of the associated costs.<br><br>The use of the proposed offsets for the Proposal is considered to be relevant and proportionate to the significance of the environmental value being impacted.  |
| 4   | Environmental offsets will be based on sound environmental information and knowledge.  | The proposed offsets have been designed to be cost-effective by targeting the retention and conservation of existing environmental values, and translocation of <i>Eucalyptus rhomboidei</i> and <i>Stenanthemum bremerense</i> . The values of the areas to be retained for conservation are well known given the level of ecological surveys and studies that Audalia have completed in the area.<br><br>Although initial advice from Western Botanical (2018) indicates that germination is likely to be achievable, Audalia acknowledges that the proposed translocation of <i>Eucalyptus rhomboidei</i> and <i>Stenanthemum bremerense</i> is not yet based on sufficient environmental knowledge given that germination studies are still being completed. Nevertheless, the protection of these species within the proposed conservation area is expected to be the key offset mechanism for these species and suitable to counterbalance the residual impacts of the Proposal. The translocation offset is therefore supplementary and not essential to counterbalance the residual impacts of the Proposal on <i>Eucalyptus rhomboidei</i> and <i>Stenanthemum bremerense</i> . |
| 5   | Environmental offsets will be applied within a framework of adaptive management.   | The combination of proposed offsets site will provide significant opportunities within the framework of adaptive management. The proposed offset site can potentially be used as a trial or pilot site for new approaches to threat reduction, and being under the management of DBCA or other management authority, will be consistently subject to new, more effective management techniques as these become best practice.<br><br>The remaining offsets have been designed to be adaptive, utilising Audalia's improved experience in revegetation and germination during the first years of operation at the Proposal. This allows information and knowledge captured during operation to be used in an adaptive manner.   |
| 6   | Environmental offsets will be focused on   | The proposed offsets have been designed to utilise improved information as it becomes available during the first years of operation at the Proposal. This allows information and knowledge captured during operation (regarding  |

| No. | Principle                       | Assessment outcome  |
|-----|---------------------------------|---|
|     | longer term strategic outcomes. | germination, translocation and revegetation) to be used to inform strategies to achieve solid strategic outcomes. |

## 6 OBJECTIVES, TARGETS AND COMPLETION CRITERIA

Table 6 sets out the objectives, targets and completion criteria for the proposed offsets.

Table 6: Objectives, targets and completion criteria

| Objective  | Target  | Completion Criteria  |
|--|---|--|
| Counterbalance the significant residual impact to <i>Marianthus aquilonaris</i> as a result of implementation of the Proposal. | The proposed Offset Site is added to conservation estate or otherwise protected (i.e. under Section 19 of the Mining Act)         | <ul style="list-style-type: none"> <li>Conservation and Parks Commission acceptance of the Offset Site into conservation estate or DMIRS protect site under Section 19 of the Mining Act</li> <li>Agreement with DBCA regarding management and funding</li> <li>Approval of Offset Strategy</li> </ul>   |
|  | Previously disturbed vegetation within the <i>Marianthus aquilonaris</i> critical habitat boundary (access tracks) is revegetated | <ul style="list-style-type: none"> <li>DBCA acceptance of revegetation area as suitably rehabilitated</li> </ul>   |
|  | To maintain and / or improve <i>Marianthus aquilonaris</i> critical habitat   | <ul style="list-style-type: none"> <li>DBCA agreement on proposed management actions</li> <li>Restrict access to the site (public, introduced grazers and feral animals)</li> <li>Eradicate target weed species</li> </ul>   |
|  | Improve the scientific knowledge of <i>Marianthus aquilonaris</i>   | <p>The following ongoing <i>Marianthus aquilonaris</i> research is conducted over the life of the Proposal:</p> <ul style="list-style-type: none"> <li>Ongoing germination trials</li> <li>Annual plant counts</li> <li>Regional searches after fire events</li> <li>Sub-population health monitoring</li> <li>Rehabilitation trials</li> <li>Genetic studies</li> </ul> |
| Counterbalance the significant residual impact to <i>Eucalyptus rhomboidea</i> as a result of implementation of the Proposal.  | The proposed Offset Site is added to conservation estate or otherwise protected (i.e. under Section 19 of the Mining Act)         | <ul style="list-style-type: none"> <li>Conservation and Parks Commission acceptance of the Offset Site into conservation estate or DMIRS protect site under Section 19 of the Mining Act</li> <li>Agreement with DBCA regarding management and funding</li> <li>Approval of Offset Strategy</li> </ul>   |
|  | To maintain and / or improve local <i>Eucalyptus rhomboidea</i> populations   | <ul style="list-style-type: none"> <li>DBCA agreement on proposed management actions</li> <li>Restrict access to the site (public, introduced grazers and feral animals)</li> <li>Eradicate target weed species</li> </ul>   |
|  | Improve the scientific knowledge of <i>Eucalyptus rhomboidea</i>  | <p>The following ongoing <i>Eucalyptus rhomboidea</i> research is conducted over the life of the Proposal:</p> <ul style="list-style-type: none"> <li>Ongoing germination trials</li> <li>Annual plant counts</li> <li>Regional searches after fire events</li> <li>Sub-population health monitoring</li> <li>Rehabilitation trials</li> <li>Genetic studies</li> </ul>  |
|  | All impacted <i>Eucalyptus rhomboidea</i> individuals to be   | Successful translocation of all impacted <i>Eucalyptus rhomboidea</i> individuals (numbers to be based on pre-clearance survey) to rehabilitation areas  |

| Objective  | Target  | Completion Criteria   |
|--|---|---|
|  | replaced with translocated individuals  |   |
| Counterbalance the significant residual impact to <i>Stenanthemum bremerense</i> as a result of implementation of the Proposal.            | The proposed Offset Site is added to conservation estate or otherwise protected (i.e. under Section 19 of the Mining Act) | <ul style="list-style-type: none"> <li>• Conservation and Parks Commission acceptance of the Offset Site into conservation estate or DMIRS protect site under Section 19 of the Mining Act</li> <li>• Agreement with DBCA regarding management and funding</li> <li>• Approval of Offset Strategy</li> </ul>  |
|  | To maintain and / or improve local <i>Stenanthemum bremerense</i> populations   | <ul style="list-style-type: none"> <li>• DBCA agreement on proposed management actions</li> <li>• Restrict access to the site (public, introduced grazers and feral animals)</li> <li>• Eradicate target weed species</li> </ul>  |
|  | Improve the scientific knowledge of <i>Stenanthemum bremerense</i>  | <p>The following ongoing <i>Stenanthemum bremerense</i> research is conducted over the life of the Proposal:</p> <ul style="list-style-type: none"> <li>• Ongoing germination trials</li> <li>• Annual plant counts</li> <li>• Regional searches after fire events</li> <li>• Sub-population health monitoring</li> <li>• Rehabilitation trials</li> <li>• Genetic studies</li> </ul> |
|  | All impacted <i>Stenanthemum bremerense</i> individuals to be replaced with translocated individuals                      | Successful translocation of all impacted <i>Stenanthemum bremerense</i> individuals (numbers to be based on pre-clearance survey) to rehabilitation areas   |
| Counterbalance the significant residual impact to the Proposed Bremer Range Nature Reserve as a result of implementation of the Proposal.  | To maintain and / or improve the values of the Proposed Bremer Range Nature Reserve                                       | <ul style="list-style-type: none"> <li>• DBCA agreement on proposed management actions</li> <li>• Restrict access to the site (public, introduced grazers and feral animals)</li> <li>• Eradicate target weed species</li> </ul>  |
| Counterbalance the significant residual impact to the Bremer Range Vegetation Complexes PEC as a result of implementation of the Proposal. | To maintain and / or improve the values of the Bremer Range Vegetation Complexes PEC                                      | <ul style="list-style-type: none"> <li>• DBCA agreement on proposed management actions</li> <li>• Restrict access to the site (public, introduced grazers and feral animals)</li> <li>• Eradicate target weed species</li> </ul>  |

## 7 MONITORING

Routine monitoring is necessary to ensure the proposed offsets are effective in counterbalancing the significant residual impacts on the environmental values. Table 7 provides a framework for the monitoring required, however final monitoring requirements and timings will be determined during agreements with the Conservation and Parks Commission / DBCA or other relevant parties.

Table 7: Offset monitoring schedule

| Offset  | Monitoring  | Timing   |
|---|---|--|
| Provision of funding and support (to address any DMIRS concerns) for the development of a conservation reserve or other protected area (i.e. under Section 19 of the Mining Act) for: <ul style="list-style-type: none"> <li>• <i>M. aquilonaris</i> sub-populations 1a, 1d and 1e, and surrounding critical habitat extents</li> <li>• 2 <i>Eucalyptus rhomboidea</i> sub-populations</li> <li>• 12 <i>Stenanthemum bremerense</i> sub-populations</li> </ul> The proposed conservation reserve or other protected area is shown in Figure 5 | Plant counts within each sub-population   | Annually   |
|   | Searches throughout protected area for <i>Eucalyptus rhomboidea</i> and <i>Stenanthemum bremerense</i>  | Approximately 12 months after a fire event                                   |
|   | Sub-population health monitoring  | Annually   |
|   | Weed infestation, including: <ul style="list-style-type: none"> <li>• Area of impact</li> <li>• Species list</li> <li>• Location of weed infestation</li> </ul> | Annually   |
|   | Evidence of access by public or introduced fauna  | Annually   |
|   | Evidence of unauthorised disturbance (access etc.)  | Annually   |
| Revegetation of previously disturbed vegetation within the <i>M. aquilonaris</i> critical habitat boundary (access tracks)  | Revegetation area health monitoring   | Every 6 months for the first 3 years following rehabilitation, then annually |
|   | Weed infestation, including: <ul style="list-style-type: none"> <li>• Area of impact</li> <li>• Species list</li> <li>• Location of weed infestation</li> </ul> | Every 6 months for the first 3 years following rehabilitation, then annually |
|   | Evidence of access by public or introduced fauna  | Annually   |
|   | Evidence of unauthorised disturbance (access etc.)  | Annually   |
| On ground management within <i>M. aquilonaris</i> critical habitat and local <i>Eucalyptus rhomboidea</i> and <i>Stenanthemum bremerense</i> populations  | Plant counts within each sub-population   | Annually   |
|   | Sub-population health monitoring  | Annually   |
|   | Weed infestation, including: <ul style="list-style-type: none"> <li>• Area of impact</li> <li>• Species list</li> <li>• Location of weed infestation</li> </ul> | Annually   |
|   | Evidence of access by public or introduced fauna  | Annually   |
|   | Evidence of unauthorised disturbance (access etc.)  | Annually   |
| Ongoing <i>M. aquilonaris</i> , <i>Eucalyptus rhomboidea</i> and <i>Stenanthemum bremerense</i> research  | Germination trials – reporting results  | At least annually  |
|   | Plant counts within each local sub-population   | Annually   |
|   | Regional searches of optimal habitat for <i>M. aquilonaris</i> , <i>Eucalyptus rhomboidea</i> and <i>Stenanthemum bremerense</i>                                | Approximately 12 months after a fire event                                   |
|   | Local sub-population health monitoring  | Annually   |

| Offset   | Monitoring  | Timing  |
|--|---|---|
|  | Rehabilitation trial area health monitoring   | At least every 6 months for the duration of the trial                       |
|  | Genetic studies – reporting results   | At completion   |
| Successful translocation of all impacted <i>Eucalyptus rhomboidea</i> and <i>Stenanthemum bremerense</i> individuals (numbers to be based on pre-clearance survey) to rehabilitation areas | Germination trials – reporting results  | At least annually   |
|  | Rehabilitation / translocation trial area health monitoring   | At least every 6 months for the duration of the trial                       |
|  | Target plant counts within each translocated sub-population   | Annually  |
|  | Species composition within each translocated sub-population   | Annually  |
|  | Translocated sub-population health monitoring   | At least every 6 months until established, then annually                    |
|  | Weed infestation, including: <ul style="list-style-type: none"> <li>• Area of impact</li> <li>• Species list</li> <li>• Location of weed infestation</li> </ul> | Every 6 months for the first 3 years following translocation, then annually |
|  | Evidence of access by public or introduced fauna  | Annually  |
|  | Evidence of unauthorised disturbance (access etc.)  | Annually  |
| On ground management of the Proposed Bremer Range Nature Reserve and Bremer Range Vegetation Complexes PEC   | Weed infestation, including: <ul style="list-style-type: none"> <li>• Area of impact</li> <li>• Species list</li> <li>• Location of weed infestation</li> </ul> | Annually  |
|  | Evidence of access by public or introduced fauna  | Annually  |
|  | Evidence of unauthorised disturbance (access etc.)  | Annually  |

---

## 8 FUNDING ARRANGEMENTS

---

Funding arrangements are to be agreed with DWER and DBCA however regardless of the management structure Audalia will provide funding for the following:

- The development and management of a conservation reserve or other protected area (i.e. under Section 19 of the Mining Act) shown in Figure 5 for a period of 20 years;
- Revegetation of previously disturbed vegetation within the *M. aquilonaris* critical habitat boundary (access tracks);
- On ground management within *M. aquilonaris* critical habitat and local *Eucalyptus rhomboidea* and *Stenanthemum bremerense* populations for a period of 20 years;
- Ongoing *M. aquilonaris*, *Eucalyptus rhomboidea* and *Stenanthemum bremerense* research, including:
  - Ongoing germination trials;
  - Annual plant counts;
  - Regional searches after fire events;
  - Sub-population health monitoring;
  - Rehabilitation trials;
  - Genetic studies;
- The translocation of all impacted *Eucalyptus rhomboidea* and *Stenanthemum bremerense* individuals to rehabilitation areas; and
- On ground management of the Proposed Bremer Range Nature Reserve and Bremer Range Vegetation Complexes PEC for a period of 20 years.

## 9 MANAGEMENT, ROLES AND RESPONSIBILITIES

Table 8 details the management structure proposed for each offset.

**Table 8: Management of proposed offsets**

| Offset  | Management / Responsibility   |
|---|---|
| <p>Provision of funding and support (to address any DMIRS concerns) for the development of a conservation reserve or other protected area (i.e. under Section 19 of the Mining Act) for:</p> <ul style="list-style-type: none"> <li>• <i>M. aquilonaris</i> sub-populations 1a, 1d and 1e, and surrounding critical habitat extents</li> <li>• 2 <i>Eucalyptus rhomboidea</i> sub-populations</li> <li>• 12 <i>Stenanthemum bremerense</i> sub-populations</li> </ul> <p>The proposed conservation reserve or other protected area is shown in Figure 5</p> | <p>DBCA would be an appropriate management authority for the conservation reserve or other protected area, however alternative management structures could include:</p> <ul style="list-style-type: none"> <li>• Managed by Audalia under direction of DBCA; or</li> <li>• Managed by a landcare group under direction of DBCA</li> </ul> <p>The management of the reserve would be for a minimum of 20 years.</p>  |
| <p>Revegetation of previously disturbed vegetation within the <i>M. aquilonaris</i> critical habitat boundary (access tracks)</p>   | <p>If DBCA deems it suitable, Audalia would be an appropriate management authority to cut off the current access to these tracks. DBCA, Audalia or a specialised rehabilitation group could manage the rehabilitation of the tracks that lie within the critical habitat boundary.</p>  |
| <p>On ground management within <i>M. aquilonaris</i> critical habitat and local <i>Eucalyptus rhomboidea</i> and <i>Stenanthemum bremerense</i> populations</p>   | <p>DBCA would be an appropriate management authority to conduct on-ground management of the <i>M. aquilonaris</i> critical habitat and surrounds, however alternative management structures could include:</p> <ul style="list-style-type: none"> <li>• Managed by Audalia under direction of DBCA; or</li> <li>• Managed by a landcare group under direction of DBCA</li> </ul> <p>The management is proposed to be for a minimum of 20 years.</p>                                     |
| <p>Ongoing <i>M. aquilonaris</i>, <i>Eucalyptus rhomboidea</i> and <i>Stenanthemum bremerense</i> research:</p> <ul style="list-style-type: none"> <li>• Ongoing germination trials</li> <li>• Annual plant counts</li> <li>• Regional searches after fire events</li> <li>• Sub-population health monitoring</li> <li>• Rehabilitation trials</li> <li>• Genetic studies</li> </ul>  | <p>Audalia has commissioned significant research work on these species to inform this ERD. It is proposed that Audalia continue to manage the longer-term portions of this research (under direction and with advice from DBCA) such as germination, changes to plant numbers, health and rehabilitation trials.</p>  |
| <p>Successful translocation of all impacted <i>Eucalyptus rhomboidea</i> and <i>Stenanthemum bremerense</i> individuals (numbers to be based on pre-clearance survey) to rehabilitation areas</p>   | <p>Audalia and DBCA are currently undertaking germination trials for <i>Eucalyptus rhomboidea</i> and <i>Stenanthemum bremerense</i> to allow the replacement of any individuals that are required to be disturbed for the Proposal. These germination trials will continue to inform the target regrowth and establishment of these species. Once confirmed it is proposed that Audalia would manage the translocation process on site (under direction and with advice from DBCA)</p> |
| <p>On ground management of the Proposed Bremer Range Nature Reserve and Bremer Range Vegetation Complexes PEC</p>   | <p>DBCA would be an appropriate management authority for the on ground management of the Proposed Bremer Range Nature Reserve and Bremer Range Vegetation Complexes PEC, however alternative management structures could include:</p> <ul style="list-style-type: none"> <li>• Managed by Audalia under direction of DBCA; or</li> <li>• Managed by a landcare group under direction of DBCA</li> </ul> <p>The funding is proposed to be for a minimum of 20 years.</p>                 |

Table 9 identifies the key roles and responsibilities for the implementation of offsets.

**Table 9: Roles and responsibilities**

| <b>Role</b>                                | <b>Responsibility</b>  |
|--|--|
| Audalia (corporate)                        | Development of the Offset Strategy, funding of offset works for 20 years and obtaining protection for the identified offset site |
| DBCA or suitable landcare group            | Implementation of management and monitoring actions and/or providing direction to Audalia and landcare group as required         |
| Suitable landcare group                    | Implementation of management and monitoring actions if not managed by DBCA   |
| Audalia Environment / Conservation Manager | Overseeing the monitoring, management and reporting on the status of the proposed offsets under Audalia's management             |
| Audalia Site Manager                       | Onsite compliance with the Offset Strategy   |
| Technical Officers                         | Carrying out routine monitoring and management   |

---

## 10 REVIEW AND REVISION

---

This Offset Strategy is to be reviewed at least every three years, or more frequently under the following circumstances:

- Following a significant environmental incident that threatens the success of the proposed offsets;
- When there is a need to improve performance in an area of environmental conservation;
- When there are changes to activities that are being managed under this Offset Strategy; or
- When there are new activities that should be managed under this Offset Strategy.

The review is to assess whether the Offset Strategy is achieving its objectives and the requirements of approval conditions. The review is to consider environmental monitoring records, response actions taken and the results of any internal and external audits. During the review process, the reasons for varying the Offset Strategy are to be documented. The review may be initiated by any party that has a management responsibility for the implementation of the offsets.

---

## 11 CONCLUSION

---

Audalia has assessed the impacts of the Proposal against the Residual Impact Significance Model (EPA, 2014a) and has determined that the Proposal is likely to result in a significant residual impact to several environmental values.

If approved, Audalia predicts that an offset condition will be included in the MS to counterbalance the significant residual impacts of the Proposal. This draft Offset Strategy provides additional detail regarding the offsets proposed by Audalia for the Proposal.

The suitability of the proposed offsets have been assessed against the six offset principles set out in the Environmental Offsets Policy (GoWA, 2011) and the WA Offsets Template. The proposed offsets are considered to be relevant and proportionate to the significance of the environmental value being impacted.
